1

1. (Amended) A service provider node comprising:

a client program for accessing web, gopher and other Internet sites that allows

users to read documents and navigate between the documents stored in a plurality of

resume warehouses;

6

a communications link with the plurality of resume warehouses;

a communications link with at least one client;

an application for parsing job applicant data from the plurality of resume

warehouses and placing parsed resume data into a template <u>with at least one job</u>

<u>applicant field</u>; and

11

an application for collecting the parsed resume data and storing the parsed

resume data in a database, <u>comprising means for tracking the parsed resume data</u>

<u>stored in the database and utilizing the parsed resume data for increasing tracking</u>

<u>efficiency</u>.

8. (Amended) A service provider node comprising:

16

a client program for accessing web, gopher and other Internet sites that allows

users to read documents and navigate between the documents stored in at least one

resume warehouse;

a communications link with the at least one resume warehouse;

a communications link with at least one client;

21

an application for parsing job applicant data from the at least one resume

warehouse and placing parsed resume data into a template <u>with at least one job</u>

<u>applicant field</u>; and

an application for collecting the parsed resume data and storing the parsed

resume data in a database, comprising means for tracking the parsed resume data

stored in the database and utilizing the parsed data for increasing tracking efficiency.

9. (Amended) A method for resume storage and retrieval from multiple

resume warehouses comprising the steps of:

establishing a communications link between a service provider and at least one

client;

providing a client program for accessing web, gopher and other Internet sites

that allows users to read documents and navigate between the documents stored in at

least one resume warehouse;

establishing a communications link with at least one resume warehouse;

parsing job applicant data from the at least one resume warehouses and placing

parsed resume data into a template with at least one job applicant field; and

collecting the parsed resume data and storing the parsed resume data in a

database, whereby the parsed resume data stored in the database is utilized for

increasing tracking efficiency.

← No punctuation what is right

10. (Amended) A method for resume storage and retrieval from multiple

resume warehouses comprising the steps of:

establishing a communications link between a service provider and at least one

client;

providing a client program for accessing web, gopher and other Internet sites

that allows users to read documents and navigate between the documents stored in a

plurality of resume warehouses;

establishing communications link with the plurality of resume warehouses;

parsing job applicant data from the plurality of resume warehouses and placing

parsed resume data into a template <u>with at least one job applicant field</u>; and

collecting the parsed resume data and storing the parsed resume data in a

database, <u>whereby the parsed resume data stored in the database is utilized for</u>

<u>increasing tracking efficiency</u>.

21. (New) A method for job applicant data storage and retrieval from at least

one job applicant data warehouse, comprising:

accessing at least one Internet site that allows users to read documents and

navigate between the documents stored in the at least one job applicant warehouse;

parsing job applicant data from the at least one job applicant data warehouse

and placing the parsed job applicant data into at least one template with at least one

job applicant field; and

storing the at least one template in a database, whereby the parsed resume data   *? No patentable weight*

is utilized for increasing tracking efficiency.

22. (New) A computer program product comprising a computer usable

medium having control logic stored therein for causing a computer to store and

retrieve job applicant data, the control logic comprising:

first computer readable program means for accessing at least one Internet site

that allows users to read documents and navigate between the documents stored in at

least one job applicant warehouse;

second computer readable program means for parsing job applicant data from

the at least one job applicant data warehouse and placing the parsed job applicant data

into at least one template with at least one job applicant field; and

third computer readable program means for storing the at least one template in

a database, whereby the parsed resume data is utilized for increasing tracking

efficiency.
